To maximize the power of Photoshop, but also slow users down, Adobe used its free tools, JavaScript library, and web developer resources to create a web version of Photoshop. That version is called Photoshop Web. You can still work on large files with Photoshop and use the many features it offers in the professional workflow. However, for all the great features Photoshop has to offer, it can also be challenging to learn and use for many users. The web version of Photoshop provides the best of Photoshop's features and a way to share the files that can improve creative workflows. Additionally, web browsers allow users to work with and publish images, videos, and other media to the web continuously, making them easier to create and collaborate with. Along with the standard tools included in Photoshop, there are a number of specialized features that can sometimes be overlooked. While tools like layer masks and content-aware fill can go a long way towards improving your image, there are tools like layer collections or layer thumbnail galleries that can greatly improve your workflow. While you may not be ready to use those, just a reminder. **Saved and Saved Settings:** You'll notice that Photoshop has the capability to save sets of document paths, presets, brush settings, etc. Regardless of the name of the feature, they're basically "sets" of preferences that can be applied to your image. You can find them in the Tools&amp;amp;amp;amp;nbsp; -&amp;amp;amp;amp;nbsp;S... menu. 933d7f57e6
