The purpose of this study is to examine the ways that high school students deal with plagiarism on the Internet. Course Information: A study of plagiarism will be conducted over a period of two weeks, lasting approximately one-and-a-half hours. One-and-a-half hours for each week, the class period will consist of a one-hour lecture on the topic, followed by a thirty-minute period for students to participate in discussion of the issues covered in the lecture. The remaining period will be used for discussion of the topic in small groups. During the second week of the semester, students will complete a research paper based on the theme covered in the class. The topics and overall structure of the course will be developed by the instructor based on the research of relevant literature. Course Goals: The purpose of this course is to familiarize students with a variety of theories on the topic of plagiarism. In addition, the class will provide a framework for the development of students' comprehension of plagiarism. Specific Goals: In the first part of the course, the instructor will discuss several ideas relating to plagiarism as it pertains to students. In the second part of the class, the instructor will discuss the concept of plagiarism and the methods that students use to write on the Internet. At the end of the semester, students will be expected to write a research paper, which will be analyzed and used to synthesize the conclusions drawn by the instructor. The paper will be discussed in class, then published on the Internet for public review. Procedures Used for Student Evaluation: A final grade will be determined on the basis of student performance in the final paper. The instructor will present the final grade to the student, as well as a discussion of the grading criteria. Course Record: Individual student assignment that will be discussed at the beginning of class. Grading System: This course will be graded on a scale of 0 to 100 with a grading curve of 97 to 100. This course will be taken through Blackboard by all students. Source(s): Blackboard, CUNY Academic Works Academic Ethics: Ethics beyond High School - Academic Ethics and Internet Use The course will discuss the general importance of academic honesty. Particular attention will be given to internet use, sources and plagiarism. Ethics beyond High School - Academic Ethics and Internet Use Ethics Beyond High School - Academic Ethics and Internet Use Copyright 2012 Blackboard, All Rights Reserved. Fast-Help Crack + With Key

Create HTML Help documents for Windows applications with Fast-Help! Fast-Help is the ideal tool for creating help documentation in either HTML or CHM format. It can be used with any application in your development suite, even custom applications and add-ins. Ease of use Just drop a tab on a help file and you're done. Multi-language support Fast-Help supports support files in any language as well as specific project-based support files. It will support the application's default language, as well as any additional language files you choose to include. High-performance text processing Fast-Help can perform all of the processing required for a full-fledged help system. It can automatically detect and process numerous formatting options including: tables, frames, images, buttons, check boxes, windows, menus, and hyperlinks. There's no need to even provide Fast-Help with a project. It can create the support files for you. Compact size Fast-Help's file size is typically less than 25 MB when compiled. Compile your file by default so it can be reused. Great support for third-party applications Fast-Help supports the Microsoft Visual Studio, Visual C++, Visual Basic, and VB6 IDEs and compilers. It also supports all Windows desktop apps. Fast-Help runs on Windows 98, Windows 2000, Windows XP, and Windows 2003 Server. Features HTML Help file support The most common help file format on the Web, HTML Help is supported directly in Fast-Help. HTML Help files can be created from Microsoft Office applications such as Word, Excel, and PowerPoint. They can also be created from VB or VC++ applications. CHM format support CHM is the support format of many of the Microsoft Office applications, including Word, Excel, PowerPoint, Access, and Outlook. Fast-Help supports making CHM files directly from Microsoft Office applications. Project-based help files You can create and edit project-based help files with Fast-Help. Project-based support files Project-based support files support specific features or methods for a specific project. Fast-Help Description: Create HTML Help documents for Windows applications with Fast-Help! Fast-Help is the ideal tool for creating help documentation in either HTML or CHM format. It can be used with any application in your development suite, even custom applications and add-ins. Ease of use Just drop a tab on a help file

What's New In?

Fast-help is a set of tools that help you write document-oriented help for application programs. It's designed to help you create efficient, professional-looking documents. It also provides the tools to create online and offline help files. Online help is a site that visitors can reach via a standard Web browser. Offline help is a file of text that can be printed and handed out. Fast-help will allow you to create HTML help files for both online and offline help. What's New in this Version: Version 6.0.0 introduces new features and changes. Supports Mac OS X 10.4 (Tiger) and later. Support for .NET Framework 2.0 or later. Added the ability to set the language and font size for offline help. Added option to exclude the application icon and the application icon from the offline help. Added option to automatically create a help index for offline help. Added the ability to use a predefined string for application name, application version, application author, and application description. The ability to specify the beginning and ending of the text for the application description. Support for Unicode. The ability to exclude the application name and the application author from the online help. The ability to set the application name and the application description for the online help. Supports Windows XP and later. Supports .NET Framework 2.0 or later. Supports Unicode. Supports high-resolution display. Supports Vista. Added support for Unicode. Added the ability to generate PDF files for the offline help. Fixed the problem to add or remove a given language from the list of languages supported by Fast-Help. The application has a special drawing tool to create image files for web pages. Improved the application name in the context menu of the Help Project window. Added the possibility to create a small application icon for the Help Project window. Implemented the ability to include the application icon in the Help Project window. Added the ability to store the application name and the application description to the application.ini file. Added the ability to store the application name and the application description in the configuration section of the application.ini file. Added the possibility to exclude the application name and the application description from the Help Project window. Fixed a problem to print the Application window after printing the page containing the offline help. Fixed a problem to disable the help window by using the "close" menu option. Fix a problem to replace the place holders in the application help. Added a button to add and remove placeholders from the application help. Fix a problem to generate a help file without specifying the application name. Corrected the problem to display the application name in

System Requirements:
